Allowable Subject Matter

Claims 18-37 (renumbered 1-20) are allowed.

The following is an examiner's statement of reasons for allowance:

The cited prior art taken alone or in combination does not teach the claimed invention of managing software components, and more particularly to mechanisms for managing namespaces within the software development which supports a stable evolution for the software components. Specifically, claims 18 and 27 are directed to managing a globally unique namespace identifier which is maintained during importing to uniquely identify the first namespace and plurality of declaration and accessing a declaration within the plurality of declarations in the first namespace within the scope of the second namespaces by reference to the second localized common name. Cited art teaches alias namespace containing entries that reference entries in the interface namespace but does not teach managing a globally unique namespace identifier which is maintained during importing to uniquely identify the first namespace and plurality of declaration and accessing a declaration within the plurality of declarations in the first namespace within the scope of the second namespaces by reference to the second localized common namespace. Therefore, the claimed invention improves namespace convention and avoids clashes during run-time and relies on a build system to initially resolve the conflicting namespaces.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
